

Tree Watering Guidelines

Fill this bucket with water and allow it to slowly drain into the soil

AGE OF TREE	FREQUENCY	AMOUNT
1 year	2 - 3 times a week	1 bucket (5 gallons)
2 years	Once a week	2 buckets (10 gallons)
3 years	Every other week	3 buckets (15 gallons)
Established Tree	Deep water at least once a month, or when the tree's dripline is dry 6" down.	Use a soaker-hose around the tree, all the way to the dripline, for one hour or more, or use a slow-trickling garden hose for two hours.

Remember, as your tree grows, roots are growing out to approximately where the branch tips end (the "dripline") so apply water at the dripline. To learn more about caring for your trees, visit SacTree.com/TreeCare.
